- Require **PCI** testing?
- Frustrated by confusing **PCI-ASV** reports?
- Need help **interpreting** results and planning fixes?
- Not sure why **PCI DSS** is such an issue?

We can take the headache out of your PCI-DSS compliance

The PCI DSS (Data Security Standard) applies to anyone that "stores, processes or transmits" credit card data. One of the requirements for compliance is to have quarterly testing undertaken by a "PCI-ASV" (Approved Scanning Vendor).

However, many organisations seem uncertain about the requirements, aren't sure which PCI scanning vendor to use, or simply can't decode the varied reports that are produced by different vendors.

After extensive research and trialling various offerings, we selected QualysGuard PCI™ as our recommended solution. It has the lowest rate of false-positives and produces the most user-friendly reports we have seen so far. We believe it can provide our clients with the easiest, most cost-effective and highly automated way to achieve PCI DSS compliance.

What role does **First Base Technologies** play?

- Help you achieve and sustain your organisation's PCI-DSS compliance
- Interpret reports whether or not you use QualysGuard PCI™
- Manually validate possible false-positives and negotiate them with your ASV
- Decode confusing remediation instructions
- Provide access to QualysGuard PCI™ and provide skills transfer and support

So call us today - let us take the headache out of your PCI-DSS compliance...
